

Create Beautiful Gardens to keep Water Clean

Design a Native Garden

Native gardens are beautiful, save water, reduce need for fertilizer, and provide wildlife habitat.

Create a Raingarden

Raingardens filter dirty stormwater from streets and rooftops before it enters streams, rivers, ponds, and lakes.

Stabilize Shorelines

Native plants have long roots that anchor soil, filter out pollutants, and discourage geese from gathering.

Join us for a **FREE** Landscaping for Clean Water presentation to see dozens of beautiful, inspirational and affordable garden designs using native plants and helping clean our waters.

After attending you can sign up to receive design and installation assistance. Some Dakota County residents will also qualify for a **\$250 grant** to install their new gardens.
